## Language Assignment 6

R.A.J. Wacanno  
11741163

November 26, 2019

- As mentioned in the previous language assignment, when a vowel is followed by a [+syll, +high] segment, the latter changes into its consonantal counterpart. This process is called gliding, and can be formalised using the following rule:

$$[+syll, +high] \rightarrow [-syll] / V\_$$

- Kambera features a process called Umlaut, which means mid vowels preceding low vowels will become lax:  
 $[+syll, -high, -low] \rightarrow [-tense] / \_C[+syll, +low]$
