

I am writing to express my interest in the Junior DevOps Engineer Linux position at ING.

In my role as server administrator for the web development course at the University of Amsterdam, I was responsible for provisioning and maintaining student virtual machines using Terraform and Ansible, and for implementing secure access through SSH certificates and SSO. And at the laptop helpdesk, I provided year-round technical support for a large variety of Linux systems, with activities ranging from fixing video card driver issues to writing kernel patches. These experiences have given me a solid foundation in Linux environments, automation, and troubleshooting.

My academic background, including a Master's in Computer Science with a focus on systems security, complements my practical skills. In addition, I have experience with Docker, Kubernetes, and Git, as well as programming in Python, Rust, C, and C++, enabling me to approach DevOps challenges with both breadth and depth.

Thank you for your consideration. I look forward to the possibility of discussing my application further.

Yours sincerely,
Sam van Kampen
